A Appendix Tables

Table A1: Summary table

	Mean	SD	Median	Min.	Max.	Obs.
<u>Individual level characteristics</u>						
Female	0.20	0.40	0.00	0	1	1007
Age	47.51	17.39	48.00	18	77	1007
Party member	0.95	0.22	1.00	0	1	1007
Years of party membership (winsorized)	15.55	15.30	10.00	0	56	1007
Perceived voice within party (1 - 5 Likert scale)	3.19	1.24	3.00	1	5	1007
<u>Prior experience</u>						
Any experience canvassing	0.78	0.42	1.00	0	1	1007
Experience: door canvassing	0.51	0.50	1.00	0	1	1007
Experience: # days door canvassing (winsorized)	13.70	32.62	1.00	0	200	1007
Experience: sticking poster	0.62	0.48	1.00	0	1	1007
Experience: campaign booth	0.69	0.46	1.00	0	1	1007
Experience: social media	0.45	0.50	0.00	0	1	1007
Experience: phone canvassing	0.19	0.39	0.00	0	1	1007
Experience: convince friends	0.66	0.47	1.00	0	1	1007
Experience: other	0.13	0.34	0.00	0	1	1007
<u>Post treatment attitudes (control)</u>						
I can make a difference through my involvement in [partyname].	3.37	1.07	4.00	1	5	326
I feel connected to [partyname].	4.24	0.81	4.00	1	5	326
My opinion is being taken into account to improve the party's election campaign.	2.75	1.08	3.00	1	5	326
I have the feeling that [partyname] is interested in my opinion.	3.02	1.09	3.00	1	5	326
The [partyname] has an effective campaigning strategy.	2.48	1.10	2.00	1	5	326
<u>Post treatment intentions (control)</u>						
# intended activities	2.42	1.77	2.00	0	6	330
Has no plans	0.16	0.37	0.00	0	1	330
Intention: door canvassing	0.31	0.46	0.00	0	1	330
Intention: # days door canvassing	2.24	5.57	0.00	0	35	328
Intention: sticking posters	0.39	0.49	0.00	0	1	330
Intention: campaign booth	0.56	0.50	1.00	0	1	330
Intention: social media	0.47	0.50	0.00	0	1	330
Intention: phone canvassing	0.12	0.33	0.00	0	1	330
Intention: convince friends	0.70	0.46	1.00	0	1	330
Intention: other	0.13	0.34	0.00	0	1	330
<u>Post treatment behavior (control)</u>						
Knocked on any door	0.00	0.05	0.00	0	1	335
# doors knocked	0.10	1.75	0.00	0	32	335
<u>Provided comments (all treatment)</u>						
Any comment	0.51	0.50	1.00	0	1	672
Nonsense comment	0.02	0.13	0.00	0	1	672
Constructive comment	0.38	0.49	0.00	0	1	672
Comment length	104.52	193.55	7.00	0	1037	672

Notes: Table A1 presents summary statistics of the experimental sample.

Table A2: Pooled balance table

	Control	Treatment	Δ	$p(\Delta = 0)$
<u>Individual level characteristics</u>				
Female	0.21	0.20	-0.01	0.68
Age	48.10	47.21	-0.89	0.44
Party member	0.94	0.95	0.01	0.49
Years of party membership (winsorized)	15.12	15.76	0.64	0.53
Perceived voice within party (1 - 5 Likert scale)	3.11	3.23	0.12	0.15
Expected vote share own party (z)	0.01	-0.11	-0.12	0.06
Expected vote share competitor party 1 (z)	-0.00	0.01	0.01	0.91
Expected vote share competitor party 2 (z)	0.00	-0.04	-0.05	0.51

Experience: other	0.12	0.14	0.13	0.44	0.63	0.77

Notes: Table A4 presents a balance table by feedback announcement.

Table A5: Correlation between canvassing intentions and actual canvassing

	Any door		Doors (wins)	
	(1)	(2)	(3)	(4)
Intention: Any canvassing	0.057*** (0.013)	0.053*** (0.014)	2.967*** (0.751)	2.646*** (0.735)
Control mean	0.00	0.00	0.10	0.10
Number of Observations	964	964	964	964
Control variables		X		X

Notes: Table A5 presents the correlations between a dummy indicating any canvassing intention and observed canvassing behavior. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$

Table A6: Levels of canvassing activity across treatment groups

	Control	Any treatment	Instrumental + feedback	Intrinsic + feedback	Instrumental + no feedback	Intrinsic + no feedback
# Individuals with any canvassing	1	20	4	6	7	3
Average doors (conditional on any canvassing)	32	46.5	62.25	45.5	37.86	47.67
Average doors	0.01	1.38	1.54	1.63	1.51	0.86
Number of observations	335	672	162	168	176	166

Notes: Table A6 presents absolute levels of canvassing activities across treatment groups.

Table A7: Treatment effect on any doors: Logit estimation

	Any canvassing (app data)	
	(1)	(2)
Panel A: Main effects		
Any voice treatment	2.327** (1.027)	2.359** (1.106)
Marginal effect	0.030	0.033
Panel B: Type of voice		
Instrumental	2.419** (1.048)	2.574** (1.137)
Intrinsic	2.225** (1.057)	2.154* (1.132)
Marginal effect: Instrumental	0.100	0.092
Marginal effect: Intrinsic	0.098	0.077
p(Instrumental = Intrinsic)	0.67	0.37
Panel C: Feedback announcement		
Feedback	2.345** (1.052)	2.339** (1.145)
No feedback	2.309** (1.052)	2.379** (1.117)
Marginal effect: Instrumental	0.101	0.083
Marginal effect: Intrinsic	0.098	0.086
p(Feedback = No feedback)	0.94	0.93
Control mean	0.00	0.00
Number of Observations	1007	1007
Controls		X

Notes: Table A7 presents the main treatment effects estimated using logit regressions. Panel A displays pooled treatment effects. Panel B displays heterogeneity by type of voice. Panel C displays heterogeneity by whether supporters saw the feedback announcement. The table displays logit coefficients and marginal effects. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$

Table A8: Main treatment effects without control variables

	App data		Survey data	
	(1) Any	(2) Doors (wins)	(3) # intended activities	(4) Voice index (z)
Panel A: Main effects				
Any voice treatment	0.027*** (0.007)	1.288*** (0.362)	0.327*** (0.119)	0.120* (0.068)
Panel B: Type of voice				
Instrumental	0.030*** (0.010)	1.425*** (0.520)	0.388*** (0.138)	0.177** (0.078)
Intrinsic	0.024** (0.009)	1.150** (0.485)	0.265* (0.137)	0.062 (0.079)
p(Instrumental = Intrinsic)	0.67	0.69	0.37	0.15
Panel C: Feedback announcement				
Feedback announcement	0.027*** (0.010)	1.486*** (0.550)	0.401*** (0.138)	0.145* (0.079)
No feedback announcement	0.026*** (0.010)	1.097** (0.455)	0.258* (0.137)	0.096 (0.078)
p(Feedback = No feedback)	0.94	0.58	0.30	0.54
Control mean	0.00	0.10	2.42	-0.00
Number of Observations	1007	1007	964	955

Notes: Table A8 presents the main treatment effects without control variables. Panel A displays pooled treatment effects. Panel B displays heterogeneity by type of voice. Panel C displays heterogeneity by whether supporters saw the feedback announcement. Columns (1) and (2) show treatment effects on canvassing behavior measured using the smartphone application. Column (3) shows the impact on the number of planned campaign activities. Column (4) shows the impact on the voice index measured through the survey. All specifications do not include control variables. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$

Table A9: Treatment effects on overall campaign activity

p(Feedback = No feedback)	0.25	0.98	0.58	0.60	0.92	0.45	0.84	0.25
Control mean	2.42	0.56	0.12	0.39	0.70	0.47	0.31	2.24
Number of Observations	964	964	964	964	964	964	964	961

Notes: Table A9 presents the main treatment effects with control variables. Panel A displays pooled treatment effects. Panel B displays heterogeneity by type of voice. Panel C displays heterogeneity by whether supporters saw the feedback announcement. Column (1) presents the effects on the number of planned campaign activities. Columns (2) to (7) present impacts on the individual planned activities. Column (8) presents the effects on the number of planned canvassing days. All regressions include the following control variables: age, gender, membership dummy, years of party membership, above median perceived voice dummy, campaign experience (dummies for all past activities), and z-scored expectations for the vote shares of the own party and the two main competitors. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$

Table A10: Correlation of canvassing intentions and behavior by treatment status

	Any door		Doors (wins)	
	(1) Treatment	(2) Control	(3) Treatment	(4) Control
Intention: Any canvassing	0.079*** (0.019)	0.010 (0.010)	3.889*** (0.995)	0.317 (0.316)
Group outcome mean	0.03	0.00	1.38	0.10
Number of Observations	672	335	672	335
p-value(control=treatment)	0.00		0.00	

Notes: Table A10 presents the correlations between canvassing intentions and canvassing behavior by treatment status. Columns (1) and (2) show correlations between canvassing intentions and a dummy for any canvassing activity. Columns (3) and (4) show correlations between canvassing intentions and the number of canvassed doors. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$

Table A11: Treatment effects on supporters' perceptions

	(1) Voice index	(2) Diff through engagement	(3) Being heard	(4) Feels connection	(5) Party interested
Panel A: Main effects					
Any voice treatment	0.082 (0.058)	0.092 (0.061)	0.041 (0.061)	0.084 (0.064)	0.041 (0.057)

Feedback announcement	0.116* (0.067)	0.105 (0.071)	0.069 (0.071)	0.092 (0.072)	0.100 (0.067)
No feedback announcement	0.050 (0.064)	0.080 (0.068)	0.015 (0.070)	0.076 (0.073)	-0.013 (0.065)
p(Feedback = No feedback)	0.28	0.70	0.44	0.82	0.09
Control mean	-0.00	-0.00	-0.00	-0.00	-0.00
Number of Observations	955	955	955	955	955

Notes: Table A11 presents the treatment effects on supporters' perceptions. Panel A displays pooled treatment effects. Panel B displays heterogeneity by type of voice. Panel C displays heterogeneity by whether supporters saw the feedback announcement. Column (1) shows treatment effects on a voice index. Columns (2) to (5) show treatment effects on the index components. All specifications include the following control variables: age, gender, membership dummy, years of party membership, above median perceived voice dummy, campaign experience (dummies for all past activities), and z-scored expectations for the vote shares of the own party and the two main competitors. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$

Table A12: Treatment effects on perceived campaign effectiveness

	Effective campaign (z)
	(1)
Panel A: Main effects	
Any voice treatment	-0.072 (0.068)
Panel B: Type of voice	
Instrumental	-0.084 (0.076)
Intrinsic	-0.060 (0.080)
p(Instrumental = Intrinsic)	0.76
Panel C: Feedback announcement	
Feedback announcement	-0.074 (0.080)
No feedback announcement	-0.071 (0.077)
p(Feedback = No feedback)	0.97
Control mean	0.00
Number of Observations	955

Notes: Table A12 presents the treatment effects on respondents' perceptions of the effectiveness of the campaign. Panel A displays pooled treatment effects. Panel B displays heterogeneity by type of voice. Panel C displays heterogeneity by whether supporters saw the feedback announcement. Column (2) includes the following control variables: age, gender, membership dummy, years of party membership, above median perceived voice dummy, campaign experience (dummies for all past activities), and z-scored expectations for the vote shares of the own party and the two main competitors. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$

Notes: Table A16 presents the treatment effects on supporters' perceptions. Columns (1) and (2) show treatment effects on a voice index. Columns (3) to (10) show treatment effects on the index components. Even columns include the following control variables: age, gender, membership dummy, years of party membership, above median perceived voice dummy, campaign experience (dummies for all past activities), and z-scored expectations for the vote shares of the own party and the two main competitors. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$

B Appendix Figures

Figure A1: Distribution of perceived voice prior to treatment

Figure A2: Correlates of perceived voice

Notes: Figure A2 presents the regression coefficients of a regression of perceived voice (z-scored) on all available pre-determined variables. All independent variables are standardized. Prior voice (z) is the standardized measure of the question described in Figure A1. The voice index is an index of four questions measured after treatment administration. The sample for the voice index regression is restricted to the control group. Bars represent 95% confident intervals.

Figure A3: Heterogeneous effects by prior voice

Notes: Figure A3 presents the impacts of the treatment by prior voice. High prior voice indicates above median prior voice (the top two categories displayed in Figure A1). Panel A shows treatment effects on canvassing activity. Panel B shows impacts on the voice index. All available pre-determined variables are included as controls. Bars represent 95% confident intervals. Stars indicate significance levels of a test of equality of treatment effects across the two groups. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$

C Additional results on voiced opinions

C.1 Descriptives

Open-ended responses Treated party supporters were able to provide their opinions in an open text box. These opinions indicate that a substantial fraction of party supporters experience high demand for voice.¹⁸ Table A1 illustrates that 51 percent of supporters give voluntary input when offered the opportunity to share their opinions via an open-ended text box. Moreover, 36 percent of these party supporters provide constructive input. The most commonly mentioned topics are related to the general campaign strategy, the topics that should be emphasized more heavily in the campaign, and the party's candidate selection decisions. Overall, the open-ended data thus suggests both a high engagement of survey participants and a significant demand for voice.

C.2 Mechanisms: Text data on voiced opinions

In this section, we analyze treatment effects on the text data consisting of the opinions party supporters voice in the open text box.

Measurement and coding We measure the voluntary provision of information through the text provided by supporters using the open text field which was part of all voice treatment conditions. Our main outcomes are a dummy taking value one if a respondent made any comment, a dummy taking value one if a nonsensical comment was provided, a dummy taking value one if a respondent made a constructive comment, and finally the length of the written text as measured by the number of characters winsorized at the 99th percentile).¹⁹

Specification Empirically, we estimate the following equation among all respondents who received any voice treatment:²⁰

$$Y_i = \phi_0 + \phi_1 treatment_i^{type} + \phi X_i + \varepsilon_i \quad (1)$$

where Y_i is either dummy whether a (specific type of) comment was provided or the length of the comment provided, and where $treatment_i^{type}$ is a dummy indicating whether the supporter received a specific type of the voice treatment (either the instrumental version of the voice treatment or a voice treatment with an announcement of feedback).

Results Table A17 shows the treatment effects of the instrumental treatment (Panel A) and the feedback treatment (Panel B). The Table highlights that neither the instrumental treatment nor the feedback treatment affect the likelihood of making any comment or making a constructive comment. Respondents in the instrumental treatment are 2 percentage points

¹⁸We observe this open-ended data for respondents in any of the voice treatments, but not for respondents in the control group.

¹⁹All of our results are robust, but estimated less precisely if we do not apply the winsorization.

²⁰We cannot include supporters in the control group in this analysis as they were not given the opportunity to share their views.

less likely to make a nonsense comment ($p < 0.05$), compared to a mean of 3 percent in the intrinsic voice treatment group. Moreover, anticipated feedback increases the length of the written text. Supporters that were randomly assigned to the feedback condition write, on average, 33 characters more compared to respondents in a treatment condition that did not include a feedback announcement ($p < 0.05$). This suggests that the anticipation of feedback may help increase information flows in organizations by encouraging the rank and file to increase their willingness to share suggestions with the party leadership.

Table A17: Effect of feedback on provided information

	(1) Any comment	(2) Nonsense comment	(3) Constructive comment	(4) Length (characters)
Panel A: Type of voice				
Instrumental	0.008 (0.037)	-0.020** (0.009)	0.026 (0.037)	10.895 (14.092)
Intrinsic group mean	0.50	0.03	0.36	98.16
Panel B: Feedback announcement				
Feedback announcement	0.022 (0.037)	-0.005 (0.009)	0.006 (0.036)	32.604** (13.645)
No feedback group mean	0.50	0.02	0.38	85.19
Number of Observations	672	672	672	672

Notes: Table A17 presents treatment effects on the extensive and intensive margins of provided comments. Panel A shows the effects of type of voice. Panel B shows the effects of the feedback announcement. The pure control group is not included as they were not asked for comments. Length of comment is winsorized at the 99th percentile. All specifications include the following control variables: age, gender, membership dummy, years of party membership, above median perceived voice dummy, campaign experience (dummies for all past activities), and z-scored expectations for the vote shares of the own party and the two main competitors.

* $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$

Table A18: Effect of feedback on provided information - no control variables

Number of Observations	672	672	672	672

Notes: Table A18 presents treatment effects on the extensive and intensive margins of provided comments. Panel A shows the effects of type of voice. Panel B shows the effects of the feedback announcement. The pure control group is not included as they were not asked for comments. Length of comment is winsorized at the 99th percentile. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$

Survey instrument

- **Introduction**

Welcome,

we are conducting a short survey among our supporters to plan our election campaign. Your participation helps us to use our campaign resources optimally. We will treat your answers confidentially. The survey only takes 5 minutes.

Thank you very much for your help!

- **Sex**

What is your sex?

- **Age**

How old are you?

- **Party member**

Are you a member of [party name] party?

- **Years of party membership** (asked if respondent is party member)

For how many years have you been a member of [party name] party?

- **Campaigning experience**

Have you ever campaigned for the [party name] in the past?

- **Prior campaigning experience: margins**

In which election campaign activities have you participated at least once? Please select all that apply.

Canvassing

Sticking posters

Participate in campaign booth

Online advertisements for the party (e.g. sharing campaign materials on social media)

Call supporters

Talk to family, friends and acquaintances about the [party name] election program

Other

- **Canvassing: Intensive Margin**

On how many days did you go from door to door for [party name] in the past?

- **Canvassing workshop**

Have you ever participated in a canvassing training workshop?

- **Pre-treatment belief about voice**

Do you feel that your opinion is heard within the party?

- **Perceived vote shares**

What do you think: How many percent will the following parties receive in the national election on [date]?

Party name 1

Party name 2

Party name 3

- **Treatment: Instrumental**

Your opinion is very important to us. We are particularly interested in which topics seem important to you based on your experience in your constituency. We would therefore like to ask you a few questions. Your answers help us to make the election campaign more effective.

Environment, nature and climate protection

Economy

Internal security

Health and care

Work and social policies

Digitization

Education and Research

Budget, Finance and Taxes

Foreign Policy and Security Policy

Would you like to tell us more about which issues we should particularly emphasize in the election campaign? [open-text box]

- **Treatment: Instrumental + Feedback**

Your opinion is very important to us. We are particularly interested in which topics seem important to you based on your experience in your constituency. We would therefore like to ask you a few questions. Your answers help us to make the election campaign more effective.

After the completion of the survey, we will send you a summary of the results.

What do you think: How much should we emphasize the following issues in the current national election campaign? Environment, nature and climate protection

Economy

Internal security

Health and care
Work and social policies
Digitization
Education and Research
Budget, Finance and Taxes
Foreign Policy and Security Policy

Would you like to tell us more about which issues we should particularly emphasize in the election campaign? After the completion of the survey, we will send you a summary of the results. [open-text box]

- **Treatment: Intrinsic**

Your opinion is very important to us. We are particularly interested in which topics are close to your heart. We would therefore like to ask you a few questions.

How much do you personally care about the following topics?

Environment, nature and climate protection

Economy

Internal security

Health and care

Work and social policies

Digitization

Education and Research

Budget, Finance and Taxes

Foreign Policy and Security Policy

Would you like to tell us more about which topics are particularly close to your heart?
[open-text box]

- **Treatment: Intrinsic + Feedback**

Your opinion is very important to us. We are particularly interested in which topics are close to your heart. We would therefore like to ask you a few questions.

After the completion of the survey, we will send you a summary of the results.

How much do you personally care about the following topics?

Environment, nature and climate protection

Economy

Internal security

Health and care

Work and social policies

Digitization

Education and Research
Budget, Finance and Taxes
Foreign Policy and Security Policy

Would you like to tell us more about which topics are particularly close to your heart?
After the completion of the survey, we will send you a summary of the results. [open-text box]

- **Intended campaigning experience: margins**

How do you intend to contribute to the current election campaign?

Canvassing
Sticking posters
Participate in campaign booth
Online advertisements for the party (e.g. sharing campaign materials on social media)
Call supporters
Talk to family, friends and acquaintances about the [partyname] election program
Other

- **Intensive margin** (asked if extensive margin is yes)

On how many days do you plan to canvass during this election campaign?

- **Post-treatment beliefs**

To what extent do you agree with each of the following statements?
I can make a difference through my involvement in [partyname].
I feel connected to [partyname].
My opinion is being taken into account to improve the party's election campaign.
I have the feeling that [partyname] is interested in my opinion.
The [partyname] has an effective campaigning strategy.

- **Debrief** Thank you very much for your participation

D Vignette Experiment

This section describes the vignette experiment implemented with a broadly representative sample in the country of study. We recruited respondents using the online panel provider Luc.id, which is widely used in social science research (Haaland et al., 2021). The study took place in August 2022.

All respondents who successfully passed a pre-specified attention check and then completed the vignette questions at the end of the survey described in section D.2 are included in the sample. Table A19 displays summary statistics for this sample.

We analyze the data following the pre-analysis plan included in section E. Specifically, we estimate the following regression equation on a reshaped data set with two observations per respondent (one per hypothetical scenario):

$$y_i = \beta_0 + \beta_1 \text{Improved voice}_i + \varepsilon_i \quad (2)$$

where *Improved_voice_i* indicates the improved voice scenario. Standard errors are clustered at the individual level. Table D.1 presents the results of this regression.

Figure A4 further displays the cumulative distribution functions of the outcomes in each scenario.

D.1 Vignette results

Table A19: Vignette experiment summary statistics

	Mean	SD	Median	Min.	Max.	Obs.
<u>Individual level characteristics</u>						
Male	0.54	0.50	1.00	0	1	496
Age	39.08	17.79	33.00	18	77	496
Vocational degree	0.60	0.49	1.00	0	1	496
College degree	0.27	0.44	0.00	0	1	496
Working	0.67	0.47	1.00	0	1	496
Student	0.10	0.30	0.00	0	1	496
Retired	0.15	0.35	0.00	0	1	496
Party member	0.11	0.32	0.00	0	1	496

Notes: Table A19 presents the summary statistics for the vignette sample.

Table A20: Vignette experiment

	Probability of joining the party	Probability of joining the campaign
Improved voice	3.870*** (0.797)	3.411*** (0.766)
Mean status quo	28.63	31.76
Number of Observations	878	992

Notes: Table A20 presents the results of a vignette experiment testing the importance of voice described in section D. The is sample representative of the population in country of study in terms of age, gender, region, and income. Column (1) shows the effect of improved voice on the probability of joining respondents' preferred political party within the next two years. This is not asked of individuals who are already member of a political party. Column (2) shows the effect of improved voice on the probability of joining the next federal election campaign for respondents' preferred party. Standard errors are clustered at the individual level. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$

Figure A4: Cumulative distribution function of vignette experiment outcomes

Notes: Figure A4 presents the cumulative distribution functions for the outcomes of the vignette experiment described in section D. Panel A shows cumulative distribution functions for the probability of joining respondents' preferred party within the next two years. Panel A shows cumulative distribution functions for the probability of joining the next electoral campaign of respondents' preferred party.

D.2 Vignette survey

- The next question addresses the following problem. In surveys like this one, there are sometimes participants who don't read the questions carefully and just "click" through the questionnaire quickly. As a result, there are many random answers that falsify the results of the study. In order to show that you read our questions carefully, we ask you to indicate 333 as the answer to the next question.

What's your favorite number?

- First a few questions about yourself.
 - How old are you?
 - What is your gender? (Male, Female, Divers, Do not want to answer.
 - Which of the following categories best describes you? (I work full-time; I work part-time; I am unemployed; I am a student; I am retired; housewife/househusband; Other)
- What is your highest professional qualification? (No completed vocational training; Vocational training; University or technical college degree)
page break
- Are you a member of a political party? (Yes; No)
page break
- Which political party are you a member of? (XXX)
page break
- Do you support a specific political party? (Yes; No)
page break
- Which political party do you most support? (XXX)
page break
- In the past, have you campaigned for the party you are most likely to support? (Yes; No)
page break
- Imagine if the political party you are most likely to support retained its current organizational structure.

What is the probability (in %) that you would join this party within the next 2 years? (slider 0 to 100)

What is the probability (in %) that you would get involved with this party in the next federal election campaign? (slider 0 to 100)

page break

- Imagine if the political party you are most likely to support changed its organizational structure to give its members more say.

What is the probability (in %) that you would join this party within the next 2 years? (slider 0 to 100)

What is the probability (in %) that you would get involved with this party in the next federal election campaign? (slider 0 to 100)

E Pre-analysis plans

The data collections were pre-registered in the AsPredicted registry (#73332 and #103944). The pre-analysis plans for the main experiment and the vignette experiment are available on the following links: <https://aspredicted.org/v5ec6.pdf> and <https://aspredicted.org/c53jd.pdf>. They are also displayed on the subsequent pages.

Voice and Political Engagement (#73332)

Created: 08/25/2021 12:21 AM (PT)

Public: 10/21/2021 07:38 PM (PT)

Author(s)

Lukas Hensel (Peking University) - lukas.hensel@pku.edu.cn

1) Have any data been collected for this study already?

No, no data have been collected for this study yet.

2) What's the main question being asked or hypothesis being tested in this study?

In this paper, we examine the extent to which parties can increase engagement by creating a more inclusive party platform that attempts to give more voice and inclusion to party supporters.

To examine the effectiveness of "giving voice" we will run a natural field experiment with a major European party in the context of a 2021 national election. We leverage a sample of 11,500 party supporters registered in the party's campaign newsletter who are invited to join our survey. Within our survey, a random subset of supporters is asked for their input to the campaign, in particular, which topics should be primarily covered in the campaign.

The main hypothesis is that giving supporters a chance to express their opinions ("giving supporters voice") will increase engagement with the party.

3) Describe the key dependent variable(s) specifying how they will be measured.

Our main outcomes are people's engagement with the campaign as measured by their intentions to be engaged in the party's campaign as well as their actual participation in the campaign. Our main survey-based outcomes are thus the following:

A dummy for whether respondents want to take part in the door-to-door campaign.

The number of days respondents plan to take part in the door-to-door campaign (this is coded as zero for people who don't plan to take part in the door-to-door campaign).

The number of activities our respondents plan to engage in this electoral campaign (this includes 1) participation in the door-to-door campaign, 2) sticking posters, 3) Participate in the campaign booth, 4) engage in online campaigning, 5) call supporters, 6) campaign with family members. We may also analyze these activities individually.

We will measure actual participation in the campaign via a smartphone application developed by the political party with whom we are collaborating. At the time of writing, the application is currently under review to address minor technical issues. It is our expectation that the smartphone application will be ready for use at the time of the survey rollout which will allow us to link survey responses, treatment status, and actual behavior in the field. In particular, we intend to study the following main outcomes based on the data derived from the smartphone application:

Whether the respondent knocked on at least one door according to the party's app.

The number of days respondents actually took part in the door-to-door campaign according to the party's app.

The number of doors visited according to the party's app.

4) How many and which conditions will participants be assigned to?

5 treatment groups:

Control group. (1/3 of the sample)

Voice - Intrinsic: People are asked to tell the party which topics are important to them personally. (1/6 of sample)

Voice + Feedback - Intrinsic: People are asked to tell the party which topics are important to them personally. People are also told that the party will give them feedback on their views as measured in the survey. (1/6 of sample)

Voice - Extrinsic: People are asked to tell the party which topics should be emphasized more in the electoral campaign. (1/6 of sample)

Voice + Feedback - Extrinsic: People are asked to tell the party which topics should be emphasized more in the electoral campaign. People are also told that the party will give them feedback on their views as measured in the survey. (1/6 of sample)

5) Specify exactly which analyses you will conduct to examine the main question/hypothesis.

We will run simple regressions with OLS of our main outcomes on dummies for the different treatment groups. If there are no statistically significant differences across groups 2-5, we plan to pool them for the main analysis.

6) Describe exactly how outliers will be defined and handled, and your precise rule(s) for excluding observations.

There will be no outliers in our survey data as all outcome variables are bounded above.

In the app data on the number of doors, we will report data winsorized at the 99th and also at the 95th percentile.

7) How many observations will be collected or what will determine sample size? No need to justify decision, but be precise about exactly how the number will be determined.

The political party with which we are collaborating has a list of email addresses for a total of 11,500 supporters. We will invite all of these supporters to participate in our survey. The exact number of participants depends on the response rate.

8) Anything else you would like to pre-register? (e.g., secondary analyses, variables collected for exploratory purposes, unusual analyses planned?)

N/A

Voice-Vignettes-August 2022 (#103944)

Author(s)

Andreas Stegmann (University of Warwick) - andreas.stegmann@warwick.ac.uk
Christopher Roth (University of Cologne) - roth@wiso.uni-koeln.de

1) Have any data been collected for this study already?

No, no data have been collected for this study yet.

2) What's the main question being asked or hypothesis being tested in this study?

Hypothesis: People would be more likely to join and engage in political parties if these parties offered their members more opportunities to voice their opinions.

3) Describe the key dependent variable(s) specifying how they will be measured.

Our key dependent variables are the following:

- likelihood of joining the preferred political party within the next 2 years.
- likelihood of engaging in the next national electoral campaign of the preferred political party.

4) How many and which conditions will participants be assigned to?

Three treatment conditions.

Control group: no change in opportunities to voice opinions in the preferred party.

Increase in voice: changes in the organizational structure which increase opportunities to voice opinions in the preferred party

5) Specify exactly which analyses you will conduct to examine the main question/hypothesis.

We estimate the following specification:

$$Y_{is} = \alpha_0 + \alpha_1 \text{HighVoice}_{is} + \epsilon_{is}$$

Where Y_{is} is the outcome of interest.

HighVoice_{is} takes value 1 for respondents in the scenario s in which respondents are asked to imagine that there are changes in the organizational structure which increase opportunities to voice opinions in the preferred party. It takes value 0 for respondents where voice remains at the status quo.

We cluster standard errors at the individual level.

6) Describe exactly how outliers will be defined and handled, and your precise rule(s) for excluding observations.

We only include participants in our study that pass a basic attention screener at the start of the survey.

Our main outcomes are bounded by 0 and 100, so we don't need to deal with outliers.

7) How many observations will be collected or what will determine sample size? No need to justify decision, but be precise about exactly how the number will be determined.

We plan to recruit 500 respondents.

8) Anything else you would like to pre-register? (e.g., secondary analyses, variables collected for exploratory purposes, unusual analyses planned?)

No.
